

GeoChem Explorer Install Quick Start

Mineralabs

GeoChem Explorer is distributed as desktop installers for macOS and Windows.

Download

Use the public release downloads repository:

https://github.com/mineralabs/Geochem_Explorer_Releases

Download the installer for your computer:

- macOS Apple Silicon: GeoChem Explorer_0.2.4_aarch64.dmg
- Windows x64: GeoChem Explorer_0.2.4_x64-setup.exe

The same release page also includes the user guide, release notes, and this quick start guide.

macOS Install

1. Download the .dmg file.
2. Open the DMG.
3. Drag GeoChem Explorer.app to Applications if prompted.
4. Open GeoChem Explorer from Applications.

If macOS warns that the app was downloaded from the internet, confirm that you want to open it. If Gatekeeper blocks the first launch, open System Settings > Privacy & Security, then allow GeoChem Explorer.

Windows Install

1. Download the Windows x64-setup.exe.
2. Run the installer.
3. Follow the prompts.
4. Open GeoChem Explorer from the Start menu or desktop shortcut.

If Windows SmartScreen warns because the app is new, choose More info, then Run anyway if you trust the Mineralabs release source.

First Run

On first run, GeoChem Explorer opens setup options for:

- update checks
- default project folders
- default input source folders
- default core photo roots

For most external users, leave update checks set to Check public GitHub releases. This lets the app find new public releases without Google Drive, OneDrive, or a synced release folder.

Internal/company users can still choose a shared release folder if Mineralabs provides one.

Load The Sample Project

Use Load Sample Project to open the bundled sample data. This is the fastest way to check that the app installed correctly.

The sample project includes drillhole data and surface sample data, so you can test:

- Scatter
- Histogram
- Plan View
- Downhole
- surface sample layers
- analyte colour scales

Updating

Use Check Updates in the top bar. GeoChem Explorer checks the public GitHub releases by default and opens the correct installer for your operating system when a newer version is available.

Close GeoChem Explorer before completing an update install.

Preview Use Notice

GeoChem Explorer is provided as free-to-use software during its current preview/beta period. Redistribution, resale, modification, reverse engineering, or commercial hosting of the installers is not permitted without written permission from Mineralabs.
